Synopsis:	

OBJECTIVES OF THE FCS SITE ENGINEERING ACCREDITATION SCHEME

1. The work has been performed safely and that the site's condition is not compromised.
2. The system actually works properly because technical matters are addressed in accordance with accepted standards.
3. The new deployment does not adversely affect existing deployments.
4. Proper long-term maintenance of the system is addressed.
5. The deployment process is properly tailored to the needs of the site. For example, very simple and low-risks sites should not have disproportionate processes applied to them. This saves a lot of money for the user and time for the installer.
6. The relevant regulation and UK law is complied with and that the installed system conforms to the conditions of the Wireless Telegraphy Act Licence, Light licence or Licence Exemption.
7. The correct licences are obtained well before work commences and that proper procedures are recommended to the licence holder on how to keep these up to date.
8. Public concerns over exposure to radio waves can be addressed in a manner consistent with Health Protection Agency Guidelines.
9. Environmental issues relating to Waste are followed.

I AGREE to uphold the objectives of the FCS Site engineering Accreditation Scheme (Y/N)
